

M Navaneeth Krishna

Senior Backend Engineer | ASP.NET Core Specialist

navaneethkrishnaindeed@gmail.com

Dear Hiring Manager,

I am writing to express my strong interest in the **Backend Engineer / ASP.NET Developer** position at your organization. With 4+ years of experience building enterprise-grade systems and a deep specialization in **fintech and accounting platforms**, I am confident in my ability to deliver robust, scalable solutions that drive business value.

Currently, I serve as the **Lead Backend Developer** at GeekyWolf, where I am architecting a **cloud-based accounting platform** comparable to Zoho Books. This system encompasses the complete accounting domain — double-entry ledger, automated journal posting, real-time financial reporting (P&L, Balance Sheet, Trial Balance, Cash Flow), invoicing with partial payments and credit notes, and multi-tenant business management. This project has given me hands-on expertise in financial data integrity, GAAP-compliant reporting, and complex domain modeling using **Domain-Driven Design**.

Key accomplishments that demonstrate my capabilities:

- **Financial Reporting Engine:** Built real-time P&L, Balance Sheet, and Trial Balance generation with date-range filtering, project-wise cost allocation, and aged receivables/payables tracking.
- **Double-Entry Accounting Core:** Implemented hierarchical Chart of Accounts with auto-generated journal entries for all transactions — ensuring debit/credit balance integrity across the ledger.
- **Multi-Tenant Architecture:** Designed Business → Users → Roles permission system with complete data isolation, supporting independent configurations per tenant.
- **Open Source Contributions:** Created **ModMon** (ASP.NET project scaffolding CLI) and **MediateX** (MediatR alternative), both battle-tested in production fintech systems.

My technical foundation includes **ASP.NET Core, C#, Entity Framework Core, MSSQL, PostgreSQL**, and modern architectural patterns including **CQRS, Clean Architecture, and Modular Monolith**. I am also pursuing a **BS in Data Science from IIT Madras**, which strengthens my analytical approach to backend development and data-intensive applications.

I am particularly drawn to organizations that value clean code, robust architecture, and solving complex domain problems. I would welcome the opportunity to bring my expertise in financial systems, enterprise architecture, and ASP.NET development to your team.

Thank you for considering my application. I look forward to discussing how my experience aligns with your team's goals.

Sincerely,

M Navaneeth Krishna
