PROFESSIONAL SUMMARY

Senior Flutter Developer with 4+ years building production mobile applications with a performance-first mindset. Creator of **PipeX** (state management #1 in Rainbench — 5,091 drops/sec) and **fbloc_event_gen** (70-85% BLoC boilerplate reduction) — both actively used in production apps. Strong expertise in clean architecture, BLE integrations, CI/CD, and shipping faster with code generation.

SKILLS

Mobile: Flutter, Dart, widget performance, state management (PipeX), BLoC + code generation

Architecture: Clean Architecture, Dependency Injection, Repository Pattern, Modular Design

Integrations: REST APIs, Firebase, BLE, Push Notifications, Local Storage

DevOps: CI/CD (GitHub Actions, Codemagic, Fastlane), Code Generation, Automated Testing

OPEN SOURCE

PipeX — High-Performance State Management

pub.dev/packages/pipe_x | Benchmark: [github.com/navaneethkrishnaindeed/rainbench](#)

- Reactive "pipe" model for fine-grained rebuilds (only dependent widgets update)
- Lifecycle-aware plumbing (no manual cleanup required)
- Computed + async pipes for derived state and loading/error flows

SCORES

- #1 **pipe_x** — **5,091.65** drops/sec (9.82s)
- **7.05x** faster than **flutter_bloc** in the benchmark

fbloc_event_gen — Flutter BLoC Event Generator

pub.dev/packages/fbloc_event_gen

README

- Define state with `@generateStates`
- Define events with `@generateEvents` (Equatable-based)
- Call `registerEvents(this)` inside your BLoC constructor
- Update via `context.set{BlocName}State(...)`

EXAMPLE

```
context.setCounterBlocState(count: 5);
```

INSTALLING

```
dependencies:  
  fbloc_event_gen: ^3.2.7  
  equatable: ^2.0.7
```

```
dev_dependencies:  
  build_runner: ^2.4.6
```

```
Run: dart run build_runner build --delete-conflicting-  
outputs --use-polling-watcher
```

VERSIONS

- fbloc_event_gen: **^3.2.7**
- Works with any flutter_bloc version above BLoC requirement

SCORES

- Eliminates **70-85% BLoC boilerplate**
- Typical feature code: **80-120 lines** → **10-20 lines**

CHANGELOG

- Ongoing generator improvements (coverage, null-safety, and type-safe output)

EXPERIENCE

Senior Software Engineer L1

GeekyWolf | Trivandrum, Kerala, India

Jan 2025 - Present

ControlCore — Fintech Accounting App

- Core contributor to Flutter mobile app for cloud accounting platform (invoicing, bills, reports, multi-tenant)
- Integrated **PipeX** and **fbloc_event_gen** to improve performance and reduce BLoC boilerplate
- Reduced feature development time by ~40% (state abstraction + code generation)
- Implemented offline-first data sync with local caching and background reconciliation

- Set up CI/CD pipelines using GitHub Actions for automated builds and Play Store deployment

Sr. Flutter Developer

Feb 2024 - Jan 2025

Ivory Technologies Pvt. Ltd. | Trivandrum, Kerala, India

- Architected scalable Flutter apps using clean architecture with feature-based modularization
- Implemented offline-first data sync with local caching and conflict resolution
- Set up Fastlane + Codemagic for automated iOS/Android builds and TestFlight distribution

Flutter Developer

Feb 2023 - Jan 2024

Gmagica | Delhi, India

- Built cross-platform mobile apps with complex UI animations and custom widgets
- Integrated REST APIs with proper error handling, caching, and retry mechanisms
- Collaborated with design team to implement pixel-perfect responsive layouts

EDUCATION

BS in Data Science and Applications — Indian Institute of Technology Madras

2025 - 2029
